Ex. No.: 12 **Date:**

MITM ATTACK WITH ETTERCAP

Aim:

To initiate a MITM attack using ICMP redirect with Ettercap tool.

Algorithm:

- Install ettercap if not done already using

  the command-dnf install ettercap
- Open etter.conf file and change the values of ec_uid and ec_gid to zero from default.

  vi /etc/ettercap/etter.conf
- Next start ettercap in

  GTK ettercap -G
- Click sniff, followed by unified sniffing.
- Select the interface connected to the network.
- Next ettercap should load into attack mode by clicking Hosts followed by Scan for Hosts
- Click Host List and choose the IP address for ICMP redirect
- Now all traffic to that particular IP address is redirected to some other IP address.
- Click MITM and followed by Stop to close the attack.

Output:

[root@localhost security lab]# dnf install ettercap

[root@localhost security lab]# vi /etc/ettercap/etter.conf

[root@localhost security lab]# ettercap –G
